

A Classification performance

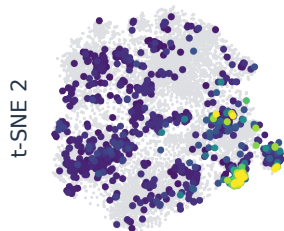

B Paired differences on the same splits

30 shared splits of 20 donors. Boxes: Q1-Q3; line: median; dots: splits.
 Paired counts: better / equal / worse. Split variation is descriptive, not a confidence interval.

A CellCNN

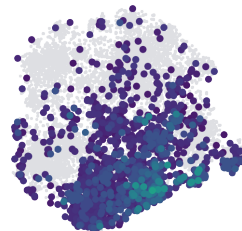

≥ 1 visit: 863; $\geq 50\%$: 84

B SVM

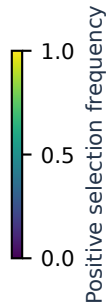

≥ 1 visit: 93; $\geq 50\%$: 9

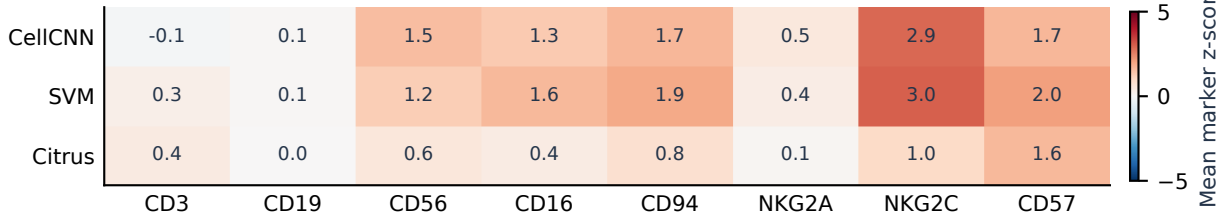

C Citrus

≥ 1 visit: 1583; $\geq 50\%$: 11

D Selected test-cell profiles · equal donor weights

30 shared splits; only held-out donors. Maps: the same 10,000 cells; colour: selection / donor's 4-16 test visits. Profiles: selected full-donor test cells → nonempty visits → equal donor weights. Grey: never selected; rules differ by method.
